WE CAN PROVIDE:

- Policy, guidance and standards development
- Feasibility studies and business case development
- Cost estimation and cost-benefit analysis
- Transport governance and management frameworks
- Project risk assessment and peer reviews
- Due diligence and project risk assessment
- Stakeholder engagement and workshop facilitation
- Technical maturity assessment
- Technical and executive mentoring and coaching

Transport Advisory services combine strategic insights and expert guidance to support public sector organisations with technical, governance and financial decision-making associated with planning, managing, and optimising their transport networks. Through our technical expertise, policy knowledge, and stakeholder engagement, we ensure that business cases, projects and policies align with organisational and community objectives for safety, efficiency, and sustainability.

EXPERIENCE

Point8 offers a wealth of experience in delivering tailored transport advisory services. We understand that transport decisions are multifaceted, requiring a balance of technical, economic, environmental, and social considerations.

Our team excels in providing actionable advice, backed by robust analysis and industry best practices. From high-level strategy development to project-specific guidance, we collaborate with clients to achieve outcomes that address immediate needs while planning for future demands.

Point8 provides expert advisory services across a range of transport-related areas, including:

- Strategic transport planning and policy development
- Transport network performance evaluation
- Integrated land use and transport planning
- Road safety strategy development
- Risk management and mitigation advice
- Project and programme management
- Stakeholder engagement & facilitation
- Independent reviews & investigations
- Client representation on major projects
- Business cases, grant funding, submissions and evaluations
- Tender scope and brief development
- Contract and tender evaluations

We deliver advisory services for various sectors and project types, such as:

- Urban and regional transport planning
- Major infrastructure projects
- Public transport systems and operations
- Freight and logistics planning
- Active transport initiatives
- Smart mobility and technology integration
- Airport, port, and intermodal transport hubs
- Land use and precinct development
